

AJAY GAUR

FULL-STACK SOFTWARE ENGINEER

ajaypathak2527@gmail.com | +91 70155 64589 | linkedin.com/in/itsajaygaur
github.com/itsajaygaur | ajaygaur.in

SUMMARY

Full-stack engineer with 3.5+ years of experience building production web, mobile, cloud, and AI systems with TypeScript, React, React Native, Node.js, Python, PostgreSQL, and AWS. Owns system and API design, real-time features, performance, observability, CI/CD, and mentorship.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Bash

Frontend & Mobile: React, Next.js, React Native, Redux Toolkit, HTML, CSS, Tailwind CSS, MUI, shadcn/ui, GSAP

Backend & Architecture: Node.js, Express.js, FastAPI, REST APIs, WebSockets, LiveKit, Microservices, Event-driven Architecture, System Design, API Design, PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS (ECS, S3, Lambda, RDS, DynamoDB, IAM, VPC, CloudWatch, API Gateway), Docker, Terraform, Git/GitHub Actions

AI, Testing & Observability: RAG, LangChain, OpenAI/Anthropic APIs, Pinecone, Vector Databases, OpenTelemetry, Datadog, Vitest, Jest

EXPERIENCE

Software Engineer | Neynar

Apr 2026 - Present

- Owned **Farcaster Audio Spaces** end to end across web, iOS, Android, and Node.js on a platform with **1M+ registered accounts**; launched to Pro users with scheduling, real-time moderation, chat/reactions, LiveKit audio, and R2 recording/playback.
- Hardened and instrumented Audio Spaces; over 30 days, the system handled **125 spaces, 1,742 join requests, and 5,001 WebSocket subscriptions** with **99.1% join-API success at 55 ms p95** and **82/82 successful recording starts**.
- Re-architected Farcaster Hub publishing with error-aware retries, bounded backoff, dead-letter queues, and StatsD, eliminating **approximately 37K retry-amplified error logs/day**; no matches appeared in the latest retained 30-day Datadog window.
- Built **Mini App push notifications** across backend, web, and mobile, including staged schema backfills, independent preferences, fail-closed feature flags, OS permissions, delivery reconciliation, and PostHog analytics.
- Cut background-worker observability overhead after tracing 60.8% of APM spans and 58.3% of ingested bytes to workers; retained logs and metrics while projecting **\$175/month immediate and \$795/month post-renewal savings**.

Software Engineer | Creative Buffer

Nov 2024 - Apr 2026

- Delivered **Apollo** within a small team and owned Advent end to end for healthcare platforms serving **nearly 10,000 users**; cut **Apollo API latency 80%**, from **10s to 1.9-2.0s**, through database indexing and batched queries.
- Architected HiveMind on AWS using Docker, ECS Fargate, ECR, an Application Load Balancer, Terraform, and GitHub Actions; instrumented services with OpenTelemetry and Grafana for metrics, logs, and distributed traces.
- Built a RAG pipeline for chatbot workflows covering PDF ingestion and chunking, embedding generation, Pinecone retrieval, and cited responses; delivered serverless components with Lambda, DynamoDB, and Cognito.
- Built WebSocket-based real-time features, virtualized and infinite-scroll interfaces, OAuth2/Active Directory authentication, custom RBAC, S3 signed-URL sharing, and analytics dashboards.
- Optimized PostgreSQL queries and application performance, reviewed architecture and code, and mentored junior engineers and interns through debugging and production delivery.

Web Developer | Girl Power Talk

Oct 2022 - Jul 2024

- Built core **Girl PowerX** product capabilities with Next.js, TypeScript, Node.js, PostgreSQL, Prisma, and Tailwind CSS; delivered desktop and mobile pages with **Lighthouse scores of 96-100** across Performance, Accessibility, Best Practices, and SEO.
- Improved Girl PowerX profile-page performance by **approximately 50%** through server-side rendering, caching, and data-fetching optimizations; added polished motion with GSAP and Framer Motion.
- Built a drag-and-drop profile builder with configurable sections and public sharing using Redux Toolkit, shadcn/ui, and Next.js Server Components, enabling **nearly 300 users** to publish profiles.

PROJECTS

Draftline | Live | GitHub - Built a secure publishing platform with creator workflows, autosave, managed media, search, SEO, and automated quality gates using Next.js, TypeScript, Neon PostgreSQL, Drizzle, Better Auth, and Vercel Blob.

Kivo | Live | GitHub - Built a multi-tenant AI knowledge base with permission-aware hybrid retrieval, reranking, asynchronous document ingestion, audit controls, and streamed cited answers using Next.js, Cloudflare Workers, D1/FTS5, Vectorize, Queues, and Workers AI.

EDUCATION

Bachelor of Science in Computer Science | DAV Centenary College, Faridabad

Aug 2017 - Dec 2020
