PROFILE

Full-stack software engineer with 4 years of experience building production web and mobile products, cloud-native services, real-time systems, and AI-enabled workflows. End-to-end ownership across architecture, performance, observability, CI/CD, and technical mentorship.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Go, SQL, Bash

Frontend & Mobile: React, Next.js, React Native, Redux Toolkit, HTML, CSS, Tailwind CSS, shadcn/ui, MUI, GSAP

Backend & Data: Node.js, Express.js, FastAPI, REST APIs, WebSockets, LiveKit, PostgreSQL, MySQL, MongoDB, Prisma, Drizzle, Redis

Cloud & DevOps: AWS (ECS, ECR, EC2, S3, Lambda, RDS, DynamoDB, CloudFront), Docker, Terraform, GitHub Actions, CI/CD, Nginx, Linux

AI & Observability: RAG, LangChain, OpenAI APIs, Anthropic, Pinecone, vector databases, OpenTelemetry, Datadog, Grafana

EXPERIENCE

Software Engineer | Neynar

Apr 2026 - Present

- Led end-to-end development of **Audio Spaces** for **Farcaster** across web, iOS, and Android, implementing LiveKit connectivity, room lifecycle, and host/listener flows.
- Delivered a **92% join-completion rate** in a retained 30-day production RUM sample (270 of 292 attempts) and instrumented lifecycle telemetry in Datadog to surface connection and audio-session failures.
- Enhanced **profile performance, responsiveness, and UI/UX**; optimized the cast composer and Direct Casts experience; implemented **push notifications for Mini Apps**; and shipped high-impact improvements across the Farcaster platform.
- Ship full-stack features with React, React Native, TypeScript, Node.js, and Docker for a decentralized social product operating on a network with **1M+ users and 116M+ casts**.

Software Engineer | Creative Buffer

Nov 2024 - Apr 2026

- Designed and delivered **production full-stack systems** across **healthcare, analytics, and AI products** including **Apollo**, Advent, Market Prophet, and HiveMind using React, Node.js, TypeScript, Python, FastAPI, PostgreSQL, MySQL, and AWS.
- Architected **HiveMind on AWS** with Docker, ECS Fargate, ECR, an Application Load Balancer, Terraform, and GitHub Actions; added **OpenTelemetry and Grafana** for metrics, logs, and distributed traces.
- Built an **end-to-end RAG pipeline** for chatbot workflows, covering PDF ingestion and chunking, embedding generation, and **Pinecone vector storage**; also delivered serverless components with Lambda, DynamoDB, and Cognito.
- Engineered **WebSocket-based real-time communication**, virtualized and infinite-scroll interfaces, secure **OAuth2/Active Directory authentication**, **custom RBAC**, S3 signed-URL document sharing, and advanced data dashboards.
- Optimized PostgreSQL queries and application performance**, reviewed tasks and code, and **mentored junior engineers and interns** on architecture, infrastructure, debugging, and delivery.

Web Developer | Girl Power Talk

Oct 2022 - Jul 2024

- Delivered **responsive web applications** with Next.js, TypeScript, Node.js, PostgreSQL, Prisma, and Tailwind CSS, including core product capabilities for **Girl PowerX**.
- Improved Girl PowerX profile-page performance by approximately **50%** through **server-side rendering and caching** while enhancing motion and interaction with GSAP and Framer Motion.
- Built a **customizable profile builder** with **drag-and-drop sections**, public sharing, Redux Toolkit, shadcn/ui, and Next.js Server Components with caching.

PROJECTS

Draftline | **Live** | **GitHub** - Publishing platform with a secure creator studio, autosave, managed media, search, SEO, and automated quality gates; built with Next.js, TypeScript, Neon PostgreSQL, Drizzle, Better Auth, and Vercel Blob.

Kivo | **Live** | **GitHub** - Multi-tenant AI knowledge base with permission-aware hybrid retrieval, reranking, document ingestion, audit controls, and streamed cited answers; built with Next.js, Cloudflare Workers, D1/FTS5, Vectorize, Queues, and Workers AI.
